Paper Airplanes Were Flying!

Take a look at some fun stuff that happened at our paper airplane STEM workshop last weekend.

The kids learned some of the basic science behind flight and then created a variety of paper airplanes which they then tested for accuracy, distance and control by trying to hit specific targets in our meeting room and auditorium. Finally they had a chance to create their own paper airplane and test the design.

You can check out the Library Gerbils' Facebook page to [see a few photos](#) of this fun event and be sure to [check our calendar](#) for future special events and STEM activities.
